

■ Green Meme Coin (GMC) Whitepaper

Profit Meets Planet — The World's First Meme Coin with a Conscience

Introduction

In an era defined by rapid technological advancement, accelerating climate change, and the explosive rise of decentralized finance (DeFi), Green Meme Coin (GMC) emerges as the world's first meme coin with a conscience. GMC combines the viral momentum of meme culture with the mission of environmental sustainability, creating a digital asset that drives profits while supporting clean water, clean air, reforestation, clean beaches, and global climate solutions. GMC is more than just a coin—it's a movement. Backed by a passionate and growing community of investors and environmental advocates, GMC provides real-world utility through staking, DAO governance, and soon carbon credit tokenization—while directly channeling resources to eco-projects that matter. "We're bridging the gap between crypto profits and planetary impact. Join us!"

Presale Details

Key Dates - Start: June 15, 2025 - End: September 8, 2025 How to Participate - Connect Wallet (MetaMask, Trust Wallet, or QR). - Purchase with ETH, USDT, or BTC. - Receive GMC instantly. Presale Rules - Maximum purchase: \$5,000 per wallet (anti-whale mechanics to ensure fair distribution).

Mission & Vision

Vision: To build the world's most impactful green cryptocurrency—widely adopted, community-driven, and globally recognized as the bridge between meme-powered momentum and environmental sustainability. Mission: - Leverage blockchain technology to fund real-world climate initiatives. - Build a community where profit meets purpose. - Support clean energy, forestry, clean water projects, wildlife conservation, and beach restoration. - Give investors a stake in a greener future through staking, DAO governance, and carbon credits.

The Problem

- Meme coins lack real-world utility. They thrive on hype but fade without true impact. - Climate change is accelerating. Trillions of dollars are required globally to combat rising temperatures, pollution, and habitat destruction. - Lack of transparency in eco-funding. Many environmental projects struggle with accountability, verification, and scalability.

The Solution

- 3% Eco-Funding Mechanism: Every transaction automatically channels funds to verified green initiatives (clean water, clean air, forestry, and beaches). - Carbon Credit Integration (Q4 2025): GMC will enter the \$2.68 trillion carbon credit market, enabling holders to participate in offset programs and trade tokenized carbon credits on-chain. - Staking Already Live: Secure long-term price stability and earn rewards. • 3 months → 3.5% APY • 6 months → 5.0% APY • 9 months → 7.5% APY - Anti-Whale Mechanics: \$5,000 wallet cap prevents manipulation and ensures fairness. - Long-Term Liquidity Lock:

80% of supply locked until June 2026 to guarantee trust and integrity.

Carbon Credit Utility ■

What Are Carbon Credits? Carbon credits are tradable certificates representing the reduction or removal of one metric ton of carbon dioxide (CO₂) or equivalent greenhouse gases. Global corporations—including Amazon, Microsoft, Google, Tesla, and major airlines—spend billions annually to offset emissions and meet regulatory requirements. Why Carbon Credits + GMC? By tokenizing carbon credits on-chain, GMC makes one of the world's largest sustainability markets accessible, transparent, and profitable for everyday investors. Investor Benefits: - \$2.68 Trillion Market Access – Be part of one of the fastest-growing sustainability sectors. - Profit with Purpose – Earn while contributing to climate initiatives like reforestation, clean energy, and carbon offsetting. - Transparency & Trust – Blockchain ensures every carbon offset is real, verified, and traceable. - Massive Growth Potential – As governments and corporations commit to net-zero, demand for carbon credits is projected to surge. - First-Mover Advantage – Early GMC holders enter at \$0.000001, comparable to buying Bitcoin at \$4.50 in 2011. How It Works (Q4 2025 Onward): - GMC will integrate with verified carbon registries and eco-partners. - Tokenized carbon credits will be tradable within the GMC ecosystem. - GMC holders can stake, redeem, or resell credits, giving them both liquidity and long-term value. - Corporate partnerships will bridge institutional carbon offset buyers directly into the GMC marketplace.

Tokenomics

- Total Supply: 100 Trillion GMC - Presale Allocation: 10 Trillion GMC - Owner Allocation: 10 Trillion GMC (employee rewards, governance pool, charity, eco-campaigns) - Locked Supply: 80 Trillion GMC (locked for 12 months) - Deflationary Model: 1% burn on every transfer

Utility

GMC is built on Ethereum (ERC-20) with layered utilities: 1. Environmental Impact – Support verified eco-projects (clean water, clean air, reforestation, renewable energy education). 2. Staking (Live) – Tiered APY rewards, driving both returns and price stability. 3. Carbon Credits (Q4 2025) – First meme coin to tokenize credits for everyday investors. 4. DAO Governance – Community-driven decision-making for eco-funding. 5. NFT Marketplace – Eco-art collectibles and “NFT Trees” tied to real-world planting.

Features

- OpenZeppelin ERC-20 Standard - 12-Month Lock for 80% Supply - \$5,000 wallet cap (anti-whale) - Multi-chain payment acceptance (ETH, USDT, BTC) - Planned burn mechanism for long-term deflation

Smart Contracts

- GMC Token: 0x70bfbBc660E73551FAb37587Dc4db223d50DB0b0 - ICO Contract: 0x380264D6404069c14b879D63b2034e4bF86f2d63

Roadmap

Phase 1 – Launch & Presale (Q2 2025) - Smart Contract Deployment - Presale at \$0.000001 - Initial Marketing Campaign Phase 2 – Post-Presale (Q3 2025) - Investor distribution - Uniswap & DEX listings - Awareness Campaign #1 Phase 3 – Ecosystem Expansion (Q4 2025) - Carbon Credit Integration (on-chain tokenization) - DAO Governance Launch - NFT Trees & Eco Collectibles - Major Exchange Listings Phase 4 – Global Movement (2026) - Eco Marketplace Launch (Clean Water, Clean Air, Clean Beaches) - Mobile & Desktop GMC App (tracking & staking) - Cross-Chain Bridge for global adoption
